NAME

      mergelo – merge layout files

SYNOPSIS

      mergelo layout1.lo layout2.lo ... > newlayout.lo

DESCRIPTION

      Mergelo merges all of the specified *layout*(1) files into one combined layout, which it puts out on its standard output. It compares the headers of all the given layout files to make sure they were all set up for the same page size.

      No changes are made to the panels' sizes or placements. If a panel appears at the same location in two layout files, they will overlap in the merged layout.

SEE ALSO
